Value Plastics Sells Automatic Tubesetter® Product Line to Clean Room Devices

Value Plastics announces the sale of its Automatic Tubesetter® product line to Clean Room Devices

Value Plastics announces the sale of its Automatic Tubesetter® product line to Clean Room Devices in Westminster, Colorado. The Automatic Tubesetter is the only totally automated assembly tool available on the market for rapid assembly of barbed fittings onto flexible tubing. With average assembly rates between 400 to 500 tubesets per hour, the Automatic Tubesetter significantly reduces the cost of tubeset assembly, making high quality connections consistently while eliminating flow restrictions and increasing pressure capabilities.

Bruce Williams, CEO of Value Plastics, said, "We decided to take this step since we felt the product mandated more development focus to deliver the kinds of capabilities our customers require. The Automatic Tubesetter has been a very successful product for us over the past seven years but it is not core to our business. We are excited to find a partner within only a few miles of Value Plastics who are specialists in automated products for tubeset assembly and can take the product to the next level."

Jon Page, President of Clean Room Devices, said, "The Automatic Tubesetter is a natural extension to our CRD100 Tubing Cutter and CRD200 Tube Spreader product lines allowing us to offer a complete range of productivity solutions for tubeset assembly. We look forward to demonstrating our passion for quality and technical excellence to Value Plastics' customers as we have to others who have benefited from our focus on manufacturing productivity tools for the clean room environment."

The Clean Room Devices CRD100 Tubing Cutter is a semi-automatic, table-top flexible tubing cutter designed for precision and speed in the production environment. The actuating button on the adjustable slide block makes this product easy to operate and ergonomically friendly. The CRD200 Tube Spreader performs a controlled internal stretching operation of most flexible tubing material providing ease of assembly and a secure fit as the tubing rebounds to its original size. Adjustment is accomplished with a simple vernier scale without the need of disassembling the unit or the use of special adjustment tools.

Clean Room Devices will provide complete sales, service, and support for new Automatic Tubesetter sales as well as for units currently in the field.

Value Plastics will continue to sell and support its Manual Tubesetter® product line. Designed for rapid assembly of barb to tube connections, the Manual Tubesetter unit joins flexible tubing and Value Plastics' barbed fittings, applying the force necessary to push the tube over the barb. As a hand-operated device, it requires no electricity or pneumatic energy.

Value Plastics, Inc., makes and markets an innovative line of fluid management components designed specifically for flexible tubing. Value Plastics products find global application in demanding healthcare OEM, research and light industrial applications, and all are produced in its Northern Colorado facility.
